Figure 1 displays two sets of NMR spectra for compound 1. The left set includes a 1D ^1H NMR spectrum (top) and a 2D ^1H - ^{13}C HMQC spectrum (bottom). The right set includes a 1D ^{13}C NMR spectrum (top) and a 2D ^1H - ^{13}C HMQC spectrum (bottom). The 1D spectra show peaks in the aromatic region (6-8 ppm for ^1H , 100-150 ppm for ^{13}C) and aliphatic region (1-4 ppm for ^1H , 20-40 ppm for ^{13}C). The 2D spectra show correlations between these regions.

Agri contributes to global warming, study says

By Jonathan W. Crutcher

WASHINGTON, May 9 (AP) — A new study says that agriculture is a major contributor to global warming, and that the impact of the sector is likely to increase as the world's population grows.

The study, published in the journal *Nature*, found that agriculture is responsible for about 14 percent of the world's greenhouse gas emissions, and that this share is expected to rise to about 25 percent by 2050.

The study also found that the impact of agriculture on global warming is likely to be even greater in developing countries, where the sector is a much larger part of the economy.

The study's findings are based on a comprehensive analysis of data from a wide range of sources, including government statistics, scientific research, and expert estimates.

The study's authors say that the findings have important implications for policy makers, who will need to take steps to reduce the impact of agriculture on global warming.

Q: What's the deal with the new 'The Sopranos'?
A: It's a new series that's been getting a lot of buzz. The show is about a mob boss who's trying to run his empire. It's a really good show, and it's got a lot of great actors. I think it's going to be a big hit.

Figure 10-14 shows the results of the regression analysis. The R^2 value is 0.94, indicating that 94% of the variation in the dependent variable is explained by the independent variable. The regression equation is $\hat{Y} = 0.0001X + 0.0001$, where \hat{Y} is the predicted value of the dependent variable and X is the independent variable.

 "One of the most serious environmental problems in the Southwest is the loss of riparian habitat," says the report. "The most serious cause of this loss is the construction of dams and levees, which have reduced the flow of water in the Colorado River and its tributaries. This has led to the degradation of the riparian habitat, which is the habitat of many species of fish and wildlife. The report calls for the construction of dams and levees to be stopped, and for the restoration of the riparian habitat. It also calls for the construction of dams and levees to be stopped, and for the restoration of the riparian habitat. It was a focal point of the Pinoy alternative music scene in the 1990s—and it's back in business. The third incarnation of Club Dredd, a Manila-based independent music venue, is set to open its doors on May 14. The venue, which is located in the heart of the city, is expected to attract a large number of fans of the Pinoy alternative music scene.

Club Dredd is a Manila-based independent music venue. It was founded in 1990 by a group of young musicians who were looking for a place to perform their music. The venue has since become a focal point of the Pinoy alternative music scene. It has hosted many of the most important acts in the scene, and it has been a place where many of the scene's most important acts have met and collaborated.
